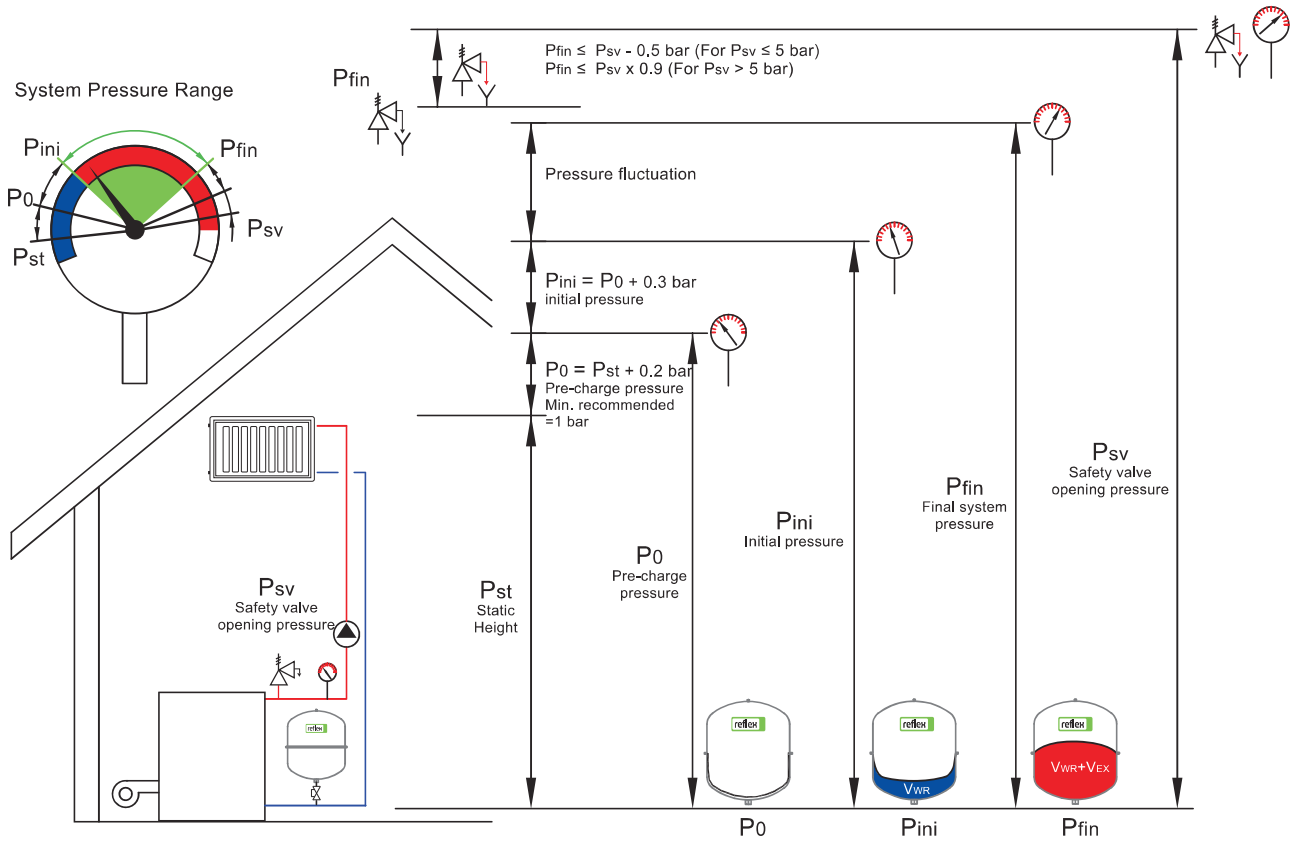
reflex
Thinking solutions.



Expansion vessels do have a number of important functions to fulfil:

- To restrict the pressure fluctuation of the system within certain limits (otherwise loss of water may occur via a responding safety relief valve)
- To prevent a negative pressure at the highest points of the installation in order to avoid the intrusion of air into the piping network
- To avoid steam building or the evaporation of the system liquid, e.g. in circuits with superheated water, solar systems
- To avoid cavitation inside pumps and fittings (preventing pump damage)
- To keep a water reserve in order to avoid a pressure drop caused by occasional losses of volume, e.g. due to venting after the initial starting up of the system
- To compensate for the variations of volume due to the changes in temperature of the system liquid

$$V_{ex} = V_{sys} \times E$$

$$V_{WR} = 0{,}005$$

$$F_{acc} = \frac{P_{fin} - P_0}{P_{fin} + 1}$$

$$V_n \geq \frac{V_{ex} + V_{WR}}{F_{acc}}$$

$$P_{fin} = P_{sv} - 0{,}5 \text{ bar } (P_{sv} < 5 \text{ bar})$$

$$P_{fin} = P_{sv} - 0{,}1 \times P_{sv} \text{ bar } (P_{sv} > 5 \text{ bar})$$

V_N = Nominal volume, litres

V_{ex} = Expanded volume, litres

V_{WR} = Water reserve, litres

V_{sys} = Total water content, litres

e = Expansion coefficient (Eg.: for 90°C, e = 0,0355)

Reflex N & NG

- For heating and chilled water applications
- Threaded connections
- Non-replaceable diaphragm, according to DIN EN 13831 norm part 3, max. operating temperature 70°C
- Meets or exceeds EC norms for pressure vessels 97/23/CE
- Durable epoxy coating with attractive new colour
- Factory pre-pressurised gas chamber (Nitrogen)

Options

- Operation pressure >10 bar
- Flanged connection:
  For G 1000 - 5000 tanks: DN 150, DN 200
  For G 8000 - 10000 tanks: DN 300

Accessories

MBM II Bladder Rupture Detector

- For the signalling of bladder rupture in Reflex G
- Consists of an electrode and relay (factory-mounted)
- Operates 230 V / 50 Hz supply
- Three terminal dry contact
- Recommended: 1 device for each vessel

Article No : 7857700 **Material Group :** 86

Relay
Wall mounted (on site)

Electrode
Factory mounted

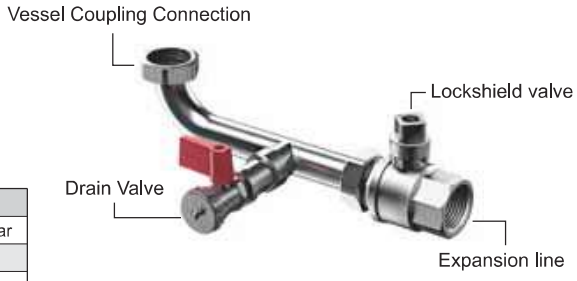
German TÜV Certification

German TÜV factory test certification

Article no : 7945610 **Material Group :** 95

AG Connection Set

- For quick installation and easy inspection of vessel
- Including lockshield valve
- G 1/2 drain valve with loose connection
- According to DIN EN 12828
- PN 16 / 120°C



Article	Article No	Material Group	Suitable For Model
R 1	9119204	80	G 400 - G 1000 Ø 740/10 bar
R 1 1/4	9119205	80	G 100 - G 500/10 bar
R 1 1/2	9119206	80	G 600 - G 1000 Ø 740/10 bar

Reflex Cap Valve - Lockshield

- Shut-off device for inspection and removal of expansion vessel
- Suitable for G, S, N, NG and V vessels

R 3/4x3/4 **Article No :** 7613000 **Material Group :** 84
R 1x1 **Article No :** 7613100 **Material Group :** 84

Digital Pressure Gauge

- Display range up to approximately 9 bar
- Pressure indication in bar, kPa, psi

Article No : 9119198 **Material Group :** 86

Reflex V Intermediate Tank

- Necessary for installations subject to norm EN 13831 with return temperatures > 70°C or cooling systems at ≤ 0°C
- To avoid faster aging of diaphragm/bladder when subjected to higher temperatures (heating) and to prevent condensation water from freezing (cooling)
- Meets or exceeds EC norms for pressure vessels 97/23/EC
- Flanged water connections: 200 litres and above
- Durable epoxy coating with attractive new colour

Vn Nominal Volume [litres]

Options V Intermediate Tank

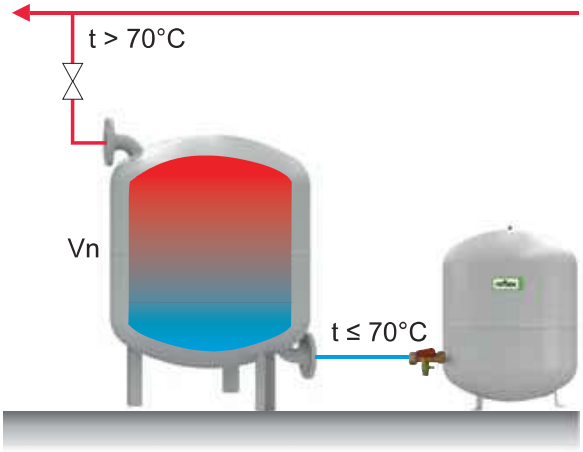
- Operation pressure >10 bar
- Nominal volume > 5000 litres
- Operation temperature > 120°C
- German TÜV factory test certification
- Individual approval carried out by the TÜV [Notified body] in accordance with the Pressure Equipment Directive 97/23/EC

V Intermediate Tank Applications

V Intermediate tank protect the diaphragms of expansion vessels from impermissible temperature loads. According to DIN 4807 T3 and EN 13831, the continuous temperature on the diaphragms must not exceed 70°C. In a cooling water systems, temperatures ≤ 0°C should be avoided.

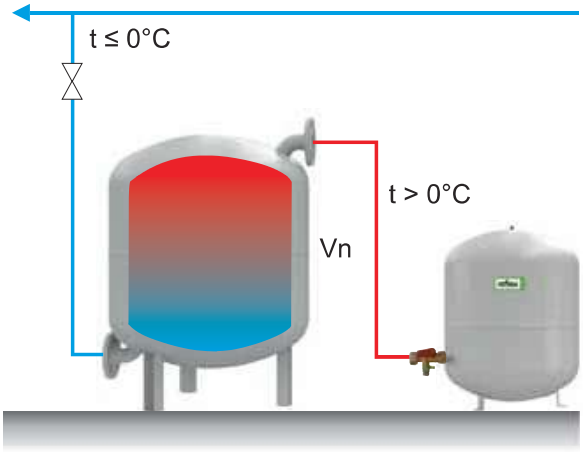
In heating & solar systems

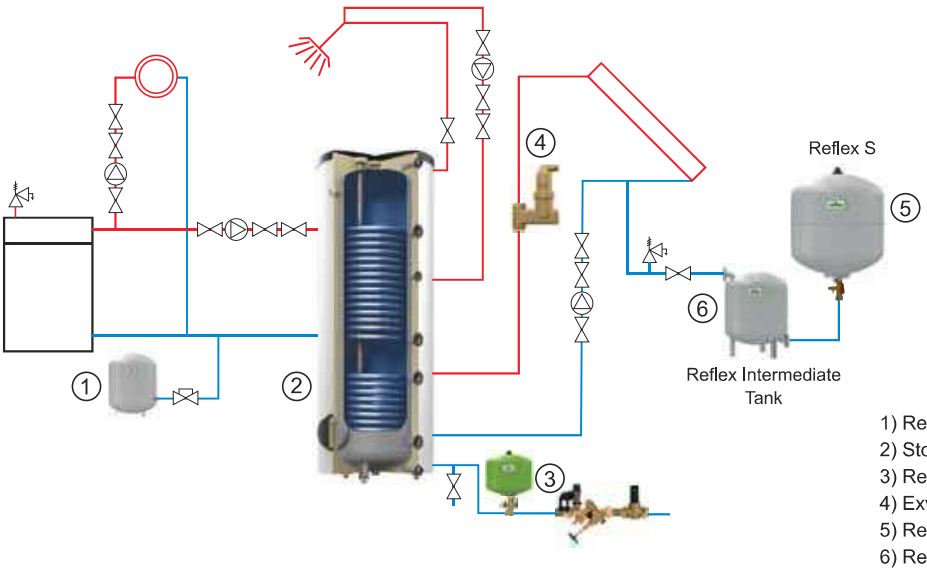
As a rule, heating & solar systems are operated at return temperatures of ≤ 70°C. The installation of intermediate tank is not necessary. In the case of older systems and industrial plants, return temperatures > 70°C are sometimes unavoidable.



In cooling circuits

If temperature is 0°C, we recommend to an intermediate tank will be installed before the cooling vessel. To size the intermediate tank volume (Vn) , consult Reflex calculation program.





Applications

- In a solar system application the expansion vessel installed to the flow pipe line therefore, The pump pressure needs to be considered while setting the precharge gas P0.
- For the life time of the membrane we recommend to install a Reflex V intermediate tank before the expansion vessel if the return flow is > 70°C

1) Reflex N, expansion vessel for boiler circuit
2) Storatherm Aqua Solar hot water heater
3) Refix DD, Hygienic expansion vessel
4) Exvoid, Air separator for solar circuit
5) Reflex S, Expansion vessel for solar system
6) Reflex V, Intermediate tank

Quick Selection Table For Diaphragm Expansion Vessels

Heating systems: 90/70°C

For detailed calculations, refer to our brochure "Pressurisation Systems - Planning, Calculation, Equipment" or visit www.reflex.de to use our Reflex Pro calculation software

Approximate water content:
Radiators
V_A = Q [kW] x 13.5 l/kW
Panel-type radiators
V_A = Q [kW] x 8.5 l/kW

Selection example
P_{SV} = 3 bar
H = 13 m
Q = 40 kW (plates 90/70°C)

V_{PH} = 1000 l (V buffer storage tank)

Calculate
V_A = 40 kW x 8.5 l/kW + 1000 = 1340 l

$P_0 \geq \left(\frac{13}{10}\ 0.2\ \text{bar}\right) = 1.5\ \text{bar}$

From tha table:
With P_{SV} = 3 bar, P_0 = 1.5 bar
V_A = 1340 litres
V_n = 250 litres (for V_A max. 1360)

Selected:
1 x Reflex N 250.6 bar
1 x cap ballvalve

Visit www.reflex.de/pro for further information and the option of downloading free of charge.

Reflex recommendations:

- Select sufficiently high safety valve actuation pressure: $P_{sv} \geq P_0 + 1.5$ bar
- If possible, apply a 0.2 bar margin when calculating the gas input pressure: $P_0 \geq \frac{H\ [m]}{10} + 0.2$ bar
- Due to the required supply pressure for the circulating pumps, select an pre-set pressure of at least 1 bar for roof-mounted systems also: $P_0 \geq 1$ bar
- In a vented system in cold conditions, set the water-side filling or initial pressure at least 0.3 bar higher than the pre-set pressure: $P_{fil} \geq P_0 + 0.3$ bar

Refix C - DE

- For potable water, heating, heat - pump, chilled water and solar applications
- **Butyl** bladder, according to DIN EN 13831 norm part 3
- Threaded stainless steel connection
- Meets or exceeds EC norms for pressure vessels 97/23/EC
- Durable epoxy coating
- Factory pre-pressurised gas chamber (Nitrogen)
- Provided with suspension bracket for easy wall mounting

Refix

Refix DD/DT Hygienic Pressure Vessels

- The Refix DD/DT vessels continue to deliver unparalleled performance and persistence, meeting all the tough requirements of the German DIN 4807 part 5. The shell of the tank is made of heavy gauge steel and has epoxy coating from inside.
- The dual water connection for internal circulation delivered in various sizes ranging from 1 1/4 up to DN 100. The butyl rubber bladder offers the lowest permeability compared to any material used today.

Refix DD

- For potable water applications according to German DIN/DVGW 4807 norm part 5
- Integrated internal circulation / anti-legionella
- **Butyl** bladder according to German KTW-C norm
- Meets or exceeds EC norms for pressure vessels 97/23/EC
- Inner anti-corrosion coating according to German KTW-A (food stuff regulation)
- Factory pre-pressurised gas chamber 4 bar (Nitrogen)
- Can be installed with Flowjet - flow through valve
- Connectable to T-piece Rp 3/4 (included in Refix DD delivery)

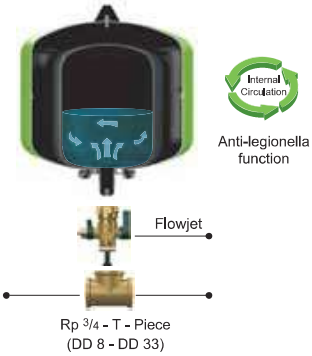
Flowjet - Flow Through, Shut-off and Discharge Valve

- For easy assembly and maintenance of Refix DD pressure tanks according to DIN/DVGW 4807 norm part 5
- Max. operating pressure 16 bar
- Max. operating temperature 70°C

Article No : 9116799 **Material Group** : 85

Flowjet



Refix DT

- For potable water applications according to German DIN/DVGW 4807 norm part 5
- Integrated internal circulation / anti-legionella
- In case of Rp 1/4 connection (60 - 500 litres) factory-equipped with Flowjet: flow-through, shut-off and discharge valve
- Replaceable butyl bladder according to German KTW-C norm
- Inner anti-corrosion coating according to German KTW-A (food stuff regulation)
- Meets or exceeds EC norms for pressure vessels 97/23/EC
- Factory pre-pressurised gas chamber 4 bar (Nitrogen)
- Reflex DT5, now with it's new name Reflex DT

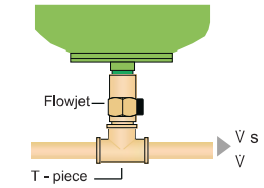
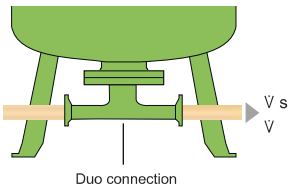
Selection according to peak volume flow V̇s

When the nominal volume of the Refix unit has been selected, it must be checked in the case of water-carrying vessels whether the peak volume flow V s resulting from the piping calculation according to DIN 1988 can be implemented on the Refix. If this is the case, the 8-33 litre vessel of the Refix DD unit may have to be replaced with a 60 litre Refix DT 60 vessel to enable a higher flow rate. Alternatively, a Refix DD unit with an appropriately dimensioned T-piece may be used.





Available connections		Recomm. max. peak flow V̇ s*	Actual Pressure loss with volume flow V̇

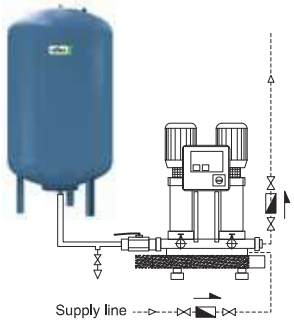
For detailed calculations, refer to our brochure “Pressurisation Systems - Planning, Calculation, Equipment” or visit www.reflex.de to use our Reflex Pro calculation software

Refix DE Applications

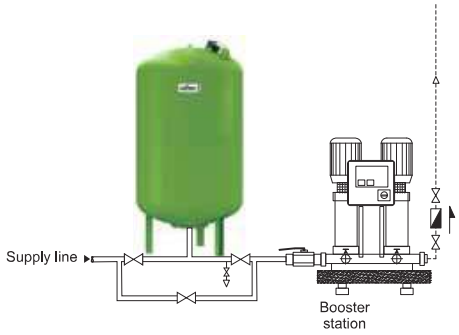
DE vessel on a booster set

Pressure vessels are installed on a pressure booster system in order to reduce pump starts and to eliminate pump starts at small draw-offs. This reduces pump wear and extends pump life time.



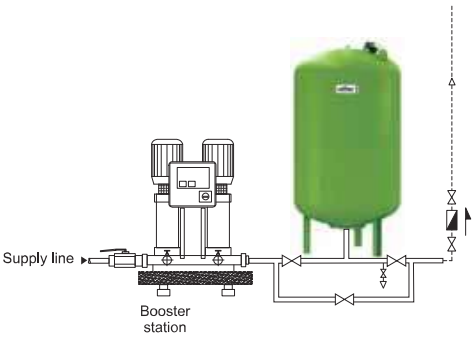
DT vessel on a booster set - suction side

Pressure vessel with flow-through function according to DIN 4807, part 5. Inside epoxy coating in combination with butyl rubber bladder ensures to fulfil the most strict German food stuff regulations such as KTW-C (bladder) and KTW-A (inner lining). If supply pressure from the water mains is too low a pressure vessel can advantageously be installed on the suction side of the booster system. This will avoid cavitation in the pump, and also will eliminate to risk of creating vacuum in the water mains by pump starts. This will reduce the pump wear.



DT vessel on a booster set - discharge side

Pressure vessel with flow-through function according to DIN 4807, part 5. Inside epoxy coating in combination with butyl rubber bladder ensures to fulfil the most strict German food stuff regulations such as KTW-C (bladder) and KTW-A (inner lining). With the vessel mounted on the discharge side of the booster system, the numbers of pump starts are reduced and also pump starts at small draw-offs are totally eliminated. Maintenance of the vessel can be done without shutting off the water supply with the shown pipework.



DT vessel on a booster set - suction and discharge side

Installation of a pressure vessel on both sides of the pressure booster set can also be necessary. See explanation above. By using the DT pressure vessel according DIN 4807, part 5 there is a high grade of protection against contamination of the cold water supply mains. Inside epoxy coating in combination with butyl rubber bladder ensures to fulfil the most strict German food stuff regulations such as KTW-C (bladder) and KTW-A (inner lining).
